World Safety Week Celebration in RGPC- 2024

Heat Stress

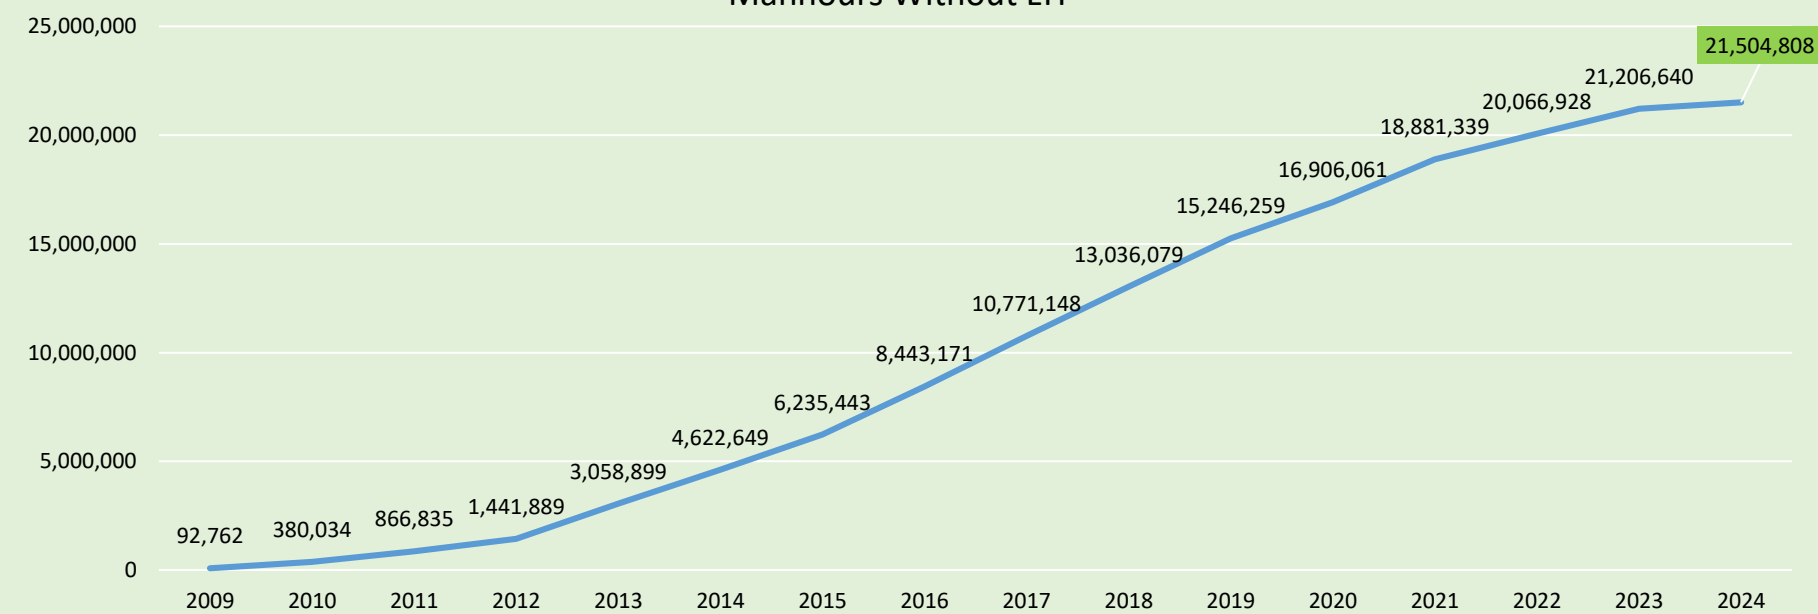

Qatar's summer climate is very hot and humid with summer temperatures ranging from 30 to 50 degree Celsius and average relative humidity of 25% to 100%. This climate creates a potentially dangerous situation for those exposed to heat.

Exposure to extreme heat can result in occupational illnesses and injuries. Heat stress can result in heat stroke, heat exhaustion, heat cramps, or heat rashes. Heat can also increase the risk of injuries in workers as it may result in sweaty palms, fogged-up safety glasses, and dizziness.
